RASPBERRIES

BLACK HAWK, Black.

This new introduction from Iowa State College is the nearest to perfection of all, friends. It is big; it is deliciously sweet; it is a beautiful shiny black and so full of that true, delightful raspberry flavor which thrills the taste, whether in pies, jams, sauces or custards, either fresh or frozen. The acme in raspberries is Black Hawk.

It is truly bountiful in yield too. Has produced over 5000 pints per acre. Iowa State College tells us the berries are firm, with no tendency to crumble and will stand up under commercial shipping and handling. It has an outstanding record for hardiness and is widely adaptable to various soils. The ripening period starts a few days later than most commercial sorts. The supply is quite limited this year.

6	12	25	100	250	500	1000
\$4.60	\$7.95	\$14.25	\$26.10	\$62.50	\$112.00	\$215.00

BRISTOL, Black.

For some twelve years, the best black raspberry we have had in size, quality and yield. The berries are large, firm, glossy jet black and deliciously sweet. Good vigorous growers and very high producers that succeed over a wide territory. Our first choice for a home or commercial planting.

CUMBERLAND, Black.

The large sweet berries of this old variety have long made it a ranking favorite. A very dependable, heavy bearer.

MORRISON, Black.

In areas where it is well adapted to climate and soil, Morrison is one of the very best.

NEW LOGAN, Black

Growing in favorable soils and under the right moisture conditions, this berry is truly choice and a real money maker.

ALL RASPBERRIES DOUBLY STATE INSPECTED

CHIEF, Red.

A few days earlier than Latham, which it closely resembles.

DURHAM, Red Everbearer.

Canes about 3 feet tall, vigorous, healthy, hardy and very productive, particularly in the fall crop. Berries dark red. Fall crop starts to ripen late August and continuing until it freezes up.

EARLIERED, Red.

Large, very good in flavor and ripens early. Excellent for canning and freezing. Plants are upright, tall, vigorous, hardy and very productive. A promising money maker for market growers.

INDIAN SUMMER, Red Everbearer.

Everyone likes this one for its extra large, dark red berries have such a delicious flavor. A very vigorous grower and heavy cropper. Fall crop October.

LATHAM, Red.

An excellent quality old standby of commercial and home growers. Large, flavorful, bright red berries and very productive. Widely adaptable to different soils.

SEPTEMBER, Red Everbearer.

Here is the red raspberry that we have all long looked for. We have grown it for nine years and it has consistently surpassed all others for us. September is very hardy, a strong grower and the leader of all in production. The berries are large to very large, beautiful, luscious and firm. Produced in two heavy crops. The first ripening in early July to August and the second starting in mid-September. One of the finest for sauce and freezing. It now ranks as a commercial berry here.

SODUS, Purple.

What a surprise is in store for those who have never seen or tasted this fine berry. A very heavy producer of mammoth, firm berries of sprightly flavor, hinting of the blackcaps. Superb for jelly and freezing. A very vigorous grower and productive. Resistant to disease.

EBONY KING, Blackberry.

The fruit is large and of good flavor. Ripens early. Productive. It is upright in growth, hardy, and resistant to orange rust. Ebony King will provide the "makings" for those delicious, home-made pies about which you have been dreaming.

RASPBERRY PRICES

All heavy one year number one plants.

NEW HARDY-CLARK DWARF APPLE TREES!

DEVELOPED BY IOWA STATE COLLEGE, AMES, IOWA

Grown By - **THE WHEELOCK WILSON NURSERY**

We use only the original Hardy Clark dwarfing stock in the production of our dwarf apple trees. This Hardy Clark dwarfing stock, developed at Iowa State College, is grown only on the hardiest root-stock, thus producing trees which are heavily rooted that will grow and produce without bracing as is often necessary with the commonly used apple dwarfing stock.

Our Clark Dwarf apple trees are the only reliably hardy dwarf trees under the severe weather conditions found in the Great Plains area.

With the strong, sturdy roots of our Clark dwarf apple, we recommend deeper planting, at least two or three inches deeper than the trees stood in the nursery. Clark dwarf trees will respond to good cul-

tural methods. Good soil and good cultivation. Up to 1/2 pound of Ammonium Nitrate per tree may be used when planting, if placed within the top inch of the soil. Then, with plenty of water during the growing season—just watch them grow.

These trees may be planted as close as 10 or 12 feet. For commercial planting, we suggest 12 by 20 feet.

Clark Dwarf apple trees come into bearing when quite young. The fruit is normal to above normal in size and the color, shape and flavor remain the same for the variety.

HARDY and EASY TO GROW. THEY REQUIRE NO MORE SPACE THAN A LARGE SHRUB.

EACH \$3.50—3 for \$10.00 — 10 to 29 trees \$3.00 each. 30 or more at \$2.85 each.
Except where noted.

AUTUMN STRAWBERRY. A very tasty, older red variety which ripens in September.

BEACON. Here is a really good eating apple which ripens in mid-August. A beautiful red that is a delight to youngsters and a very fine cooking apple. Very hardy.

***CRANDALL.** A new kind from the Illinois Experiment Station. Rome Beauty X Jonathan cross. Red, juicy, firm and crisp. Ripens early October and keeps well in storage. Promising commercially. Each.....\$4.00

DELICIOUS, Solid Red. America's King of Apples. For crisp, juicy sheer goodness, grow and enjoy Solid Red DELICIOUS.

DELICIOUS, YELLOW. A heavy producer and famous for its mild tantalizing flavor.

***FAMEUSE** (Snow) Remember this crisp, juicy fall apple with such a delightful flavor? Very hardy. Each.....\$4.00

FIRESIDE. A new hardy variety from Minnesota. A crisp, juicy, sweet red apple that is just mouth watering and a fine keeper.

GRIMES GOLDEN. A grand old apple, with such a spicy, tasty goodness, once tasted is never forgotten. Mild enough so everyone can enjoy it and so flavorful that everyone finds it a taste supreme. Makes the finest sauce imaginable.

JONATHAN. Solid Red. It's crisp, juicy, snappy flavor brings real delight to the palate of young and old. Each bite calls for another and so good for pies, sauce and salad too. The Crown Prince of Apples.

LAKELAND. Just a bit later than Wealthy, an all-over bright red of high quality and an annual bearer. Minnesota variety. Very hardy.

LODI. Similar to the yellow Transparent but a great improvement. Larger and holds up better. Ripens very early and we prize it for sauce and pies. Very hardy.

McINTOSH. A fine old late fall variety noted for its excellent quality, heavy bearing and hardness.

***MAUD.** A beautiful new red, late August apple from Iowa State College. Excellent for both eating and cooking. \$4.00 each.

MELBA. A mild, pleasantly flavored, good sized early summer variety from Canada. Enticing aroma. Very hardy.

MINJON. A new hardy variety from the Minnesota Experiment Station, similar to Jonathan but ripens earlier. Large, brilliant, dark red.

ORIOLE. Looking for something extra special in an early apple? The fine flavor of this beautiful apple will please you without end. Good for pies too and so hardy as it comes from Minnesota.

PRAIRIE SPY. This hardy Minnesota apple has a quaint, unusual flavor all of its own—really good for eating and cooking too. A beautiful all-over red and late keeper.

RED ROME BEAUTY. An all-red sport of this great baking apple. Mighty fine in pies too. Late winter.

SHARON. The delightful aroma will make your mouth water and the flavor of this rich, crisp, juicy apple from Iowa State College will delight you from September to mid-winter.

SUMMER CHAMPION. A large, late summer, red apple that is fine for both eating and cooking.

TURLEY WINESAP. This is a really good, late keeping, large, red winter apple which is rated tops for eating fresh.

WEALTHY. Remember the delicious sauce—the marvelous pies that grandmother made? She was at her best with this great old apple. You can bring those memories into reality in your home—with Wealthy. Mighty good for eating too. Very hardy.

INTERMEDIATE STOCK FOR TOP-WORKING

These trees are the foundation of your future orchard, so must be healthy, young, thrifty, well rooted trees—the best.

The Strawberry of Tomorrow!

New!

June Rockhill

(Plant Patent 854)

Never before has there been a variety of strawberry with so many desirable qualities as the JUNE ROCKHILL. The superb high quality of this berry is unequaled and mere words are usually found to be inadequate to express the surprise and satisfaction, when folks first taste this delicious berry. Its exceptional sweetness, and flavor suggestive of the wild strawberry, delights everyone.

Deep shiny red berries, with the color carried all through, characterize this berry. The berry ripens all over at the same time with no white tips to mar its beauty. It has no core. This is not true of many other varieties.

JUNE ROCKHILL is very easy to pick and the caps adhere to the berries.

Tests have proven this berry to be very choice for quick freezing and lockers, as the flavor, color and its enticing aroma are retained when frozen.

This berry begins to ripen several days before Dunlap and continues through the season of Dunlap.

**AN IDEAL BERRY FOR
HOME GARDEN
AND
LOCAL MARKET
PLANTING.**

The U. S. Department of Agriculture says, "Berry large, irregular round conic to short wedge, medium firm, bright rich red, quality EXCELLENT, foliage dark green, very healthy."

PREPAID PRICES
25 for \$2.25, 50 for \$3.75
100 for \$5.00

**for the Ultimate
in taste thrills.**

June Rockhill plants are exceptionally hardy and can be grown clear to the north limits of strawberry culture. A vigorous grower, it makes runners freely. The distinct heavy textured foliage is very resistant to leaf spot.

Blossoms are perfect and seem to possess a greater frost resistance than many varieties.

Heavy erect fruit stems hold the fruit off the ground. This prevents heavy losses in rainy periods, makes picking easier and provides cleaner berries.

Protected by Plant Patent 854. Under the U. S. Patent laws, the June Rockhill strawberry cannot be propagated for sale or gift of plants, except by permission and license of the patent holder.
